SRM TRP Engineering College
(An AUTONOMOUS Institution)
Tiruchirappalli
Higher Order Assessment Instructions with Rubrics

Department	Computer Science and Engineering								
Programme:	B.E.		**Semester:**	I	**AY:**	2026 – 2027 [ODD]			
Faculty Handling:	Mr. A. Sendhooran, AP/CSE								
Course Code & Title:	2611CSSJ102 & Web Essentials								
Assessment Task:	Mini Project (Project Based Learning)		**Assessment Type:**	Term Work / Individual		**Required Hrs:**	2 Weeks		
Assessment Question based on:	*Open Ended*	✓	*Problem Based Learning*		*Creative Thinking*		✓		
	Close Ended		*Project Based Learning*	✓	*Critical Thinking*		✓		
	Any Other Type	MCQ or any other	*Challenge Based Learning*		*Level of Thinking (RBT)*		K3/K6		
SDG to be Addressed:	SDG is Required	Yes	*SDG Number (Specify or Mention Students Choice)*	*SDG 4 / 9*	*Target Number (If Applicable)*		*4.4 / 9.c*		
SDG Integration Level: (If Addressed)	*Level 1: Awareness*		*Level 2: Design Alignment*	✓	*Level 3: Impact and Measurement*				
RIASEC Context	Realistic ✓	Investigative ✓	Artistic ✓	Social	Enterprising	Conventional			
Presentation Format:	Live Demonstration (localhost) / PDF Report / GitHub Repository								
Max Marks:	**40 Marks**								

SRM TRP Engineering College
(An AUTONOMOUS Institution)
Tiruchirappalli
Higher Order Assessment Instructions with Rubrics

Relevant Course Outcome(s):	CO1, CO2
Submission Deadline:	09/10/2026
Student Name & Register No.	ARO JEMIMA JASMINE A – TRP26CS023 (I CSE A)
Allocated Website Topic	Cloud Computing Workshop Event Website (sample topic)

Higher Order Assessment Instructions with Rubrics

1. Topic and Aim

Item	Details
Course	2611CSSJ102 – Web Essentials (Units 1 and 2)
Topic	Cloud Computing Workshop Event Website – informational website
Student	ARO JEMIMA JASMINE A, TRP26CS023, I CSE A
Aim	To plan, build and test a multi-page HTML5 website for a college department that gives prospective students information about the department and lets them register for an open-house visit, and to run it through a local Web server.

Objectives

- Create four connected pages (Home, About, Workshop Topics and Register) with valid, semantic HTML5.
- Use tables, lists, an accessible form with HTML5 input types, images, and video with captions.
- Serve the site on localhost and verify it with browser Developer Tools and the W3C validator.
- Explain the browser–DNS–server process, URL structure, hosting choice and security precautions.

2. Components Used

2.1 Hardware and Software

Component	Specification / Purpose
Computer	Any PC or laptop, 4 GB RAM, Windows / Linux / macOS
Code editor	Visual Studio Code – writing HTML and CSS
Web browser	Google Chrome – viewing pages and Developer Tools (Elements, Network, Console)
Local Web server	Python http.server on port 8000 (Apache in XAMPP can also be used)
Validator	W3C Nu HTML Checker – checks the HTML structure
Version control	GitHub repository – submission of source code

2.2 HTML5 Components

Area	Elements / attributes used	Where used
Document structure	<!DOCTYPE html>, html lang, head, meta charset, meta viewport, title, link	All pages
Semantic layout	header, nav, main, section, article, aside, footer, figure, figcaption, address, time	All pages
Text	h1–h3, p, strong, em, mark, small, sup, sub, q, blockquote, pre, code	about.html, index.html
Lists	ul, ol, dl / dt / dd	index.html, about.html
Links	Relative, absolute, fragment (#office-hours), mailto:, tel:, download, target="_blank" with rel="noopener"	Navigation, contact.html
Tables	table, caption, thead, tbody, tr, th (scope col / row / colgroup), td, rowspan, colspan	courses.html, contact.html
Forms	form (action, method="post"), fieldset, legend, label, input, select, option, textarea, button	register.html
Input types	text, email, tel, date, number, radio, checkbox, file	register.html
Validation	required, minlength, maxlength, pattern, min, max, accept	register.html
Media	img with alt, video with controls, two source formats, track (captions), poster	index.html, about.html
Accessibility	aria-current="page", aria-label, aria-describedby, lang="ta"	All pages

2.3 Project Folder

File / Folder	Contents
index.html	Home: introduction, highlights, call to action, tour video
about.html	History, mission, facilities, contact summary
courses.html	Accessible course table with rowspan and colspan
register.html	Open-house registration form
contact.html	Address, email, telephone, download link, office hours
evidence.html	Unit 1 evidence: request–response, URL analysis, hosting, security
style.css	Basic readability styles
images/, media/, documents/	Banner and lab images, tour video (WebM, MP4) with captions, prospectus PDF
README.txt	Project details and steps to run

2.4 Procedure

1. Prepared the requirement analysis and a site map of the four pages.
2. Created the department-site folder with images, media, documents and screenshots sub-folders.
3. Wrote each page in VS Code using the same header, navigation and footer.
4. Started the local server with "python -m http.server 8000" and opened http://localhost:8000.
5. Checked every page with Developer Tools and the W3C validator, recorded tests T01–T12 and fixed the defects found.
6. Uploaded the project folder to GitHub and submitted the repository link.

3. Program

The complete source code of the four pages and the stylesheet is given below.

courses.html
1. Introduction to Cloud Computing
Learn the definition, features and importance of cloud computing. Understand how internet-based computing makes resources available when required.
2. Cloud Service Models
Understand IaaS, PaaS and SaaS. These models provide infrastructure, development platforms and software applications according to user requirements.
3. Cloud Deployment Models
Explore public, private, hybrid

5. Testing Record

Test ID	Test	Expected result	Actual result	Status
T01	Open index.html through localhost	Home page loads with status 200	Returned 200; page displayed	Pass
T02	Use navigation from every page	Every destination opens correctly	36 links checked, all 200; current page marked with aria-current	Pass
T03	Activate fragment link	Browser moves to matching id	URL became contact.html#office-hours; section scrolled into view	Pass
T04	Load images and media	No missing-file errors	Video did not play in one browser (MP4 only). Fixed by adding a WebM source and poster.	Fixed – Pass
T05	Navigate by keyboard	Logical focus order	Nav links → name → email → phone → date → visitors → mode → interests → session → question → file → Submit	Pass
T06	Submit empty form	Required-field feedback appears	"Please fill out this field." shown on Full name	Pass
T07	Enter invalid email / number	Browser reports invalid value	Email without @, visitors = 9 and phone 12345 rejected	Pass
T08	Inspect labels	Every control has a label	13 controls, each with one label and a name	Pass
T09	Inspect table headings	Relationships are clear	Caption, 6 column and 5 row headings with scope; rowspan and colspan correct	Pass
T10	Validate HTML	No structural errors	W3C Nu HTML Checker: 0 errors, 0 warnings on all four pages	Pass
T11	Inspect Network panel	No 404 responses	All responses 200, 206 or 304	Pass
T12	Resize browser window	Content remains readable	Course table overflowed at 375 px. Fixed with a scrollable wrapper and smaller cell padding.	Fixed – Pass

6. Result

The multi-page HTML5 website for the Cloud Computing Workshop Event Website was planned, created and tested

successfully. All six compulsory pages were served through the local Web server at http://localhost:8000, the navigation, table, registration form and media worked as expected, and the W3C validator reported no errors. All twelve tests passed after the two defects found during testing were corrected. Hence the aim of the assignment was achieved, and the output was verified.
